

Unless specified otherwise, NBS provides 4:1 pitch. 12" length plastic coils because most plastic coil binding machines have a 4:1 pitch punching die. However some coil binding machines may have a punching die with different pitch pattern. To be sure, count the number of holes punched on an 11" sheet.

44 holes = 4:1 pitch

55 holes = 5:1 pitch

There are other less often used punch patterns for coil binding. In any case, call NBS & we will supply the coil that works best with your equipment.

Plastic coil is also available in 36" length.
